[Region8 Superfund DMP 0 91.docx](#)

Pat – Thank you and your team for the discussion also. I think we have a better idea of the thinking that went into your work plans. As a follow-up to one of the questions regarding the electronic format for data, I have attached Region 8's Draft Data Management Plan (DMP) which is based on SCRIBE. While it is still draft, the technical portions of the plan are good– there is just some fine-tuning of some of the text and it is expected that the DMP will be finalized soon.

There are a number of appendices to the DMP. I would refer you to appendix B for some of the data templates for formatting the data. There are also several links to the EPA's Environmental Response Team (ERT) in Edison, NJ web page for further information. They have a help-line for all SCRIBE data users and it is free to access the help-line for assistance with using SCRIBE so please contact them if you have questions with SCRIBE beyond what is provided in the DMP.

FYI – on other sites both in Region 8 as well as other EPA regions, PRPs are using and entering their data into SCRIBE. If you have any questions concerning the DMP, please feel free to contact me and I will put you in touch with some of our staff in the region who have developed the DMP.

Thank you.

Subject: Today's conference call

Paula, Dan and Brent,

I wanted to thank you for the time you devoted to our discussion today as well as your helping us to navigate the SAP/QAPP process. Your input is greatly appreciated as we move forward to understand the system.

As we discussed, the sonic core drilling program will commence on August 5 as scheduled, and we will dispose of drill cuttings by removing the cover material from an area in a low spot on TSF 4, excavating to create a hole, placing the cuttings in the hole and then replacing the capping material. I expect that we will need to import additional soil for capping to ensure that all tails and other material in the cuttings are covered.

Also, as we discussed, with respect to water from well development, such water production is expected to be small in quantity, and will be discharged on the top (flat) surface of the tails impoundments, where it should evaporate rapidly. Water will not be allowed to run off in a manner that would affect the river.

We will send proposed dates for providing our edited work plans, as well as proposed dates and

times for our follow-up call during the week of August 10.

Again, your attention is greatly appreciated.

Pat
